FRONTIER TECHNOLOGY WEBINAR

Introduction to Pix4D:

Integrate UAS deliverables into your current workflows!

Monday, July 17, 2017

Join us for this **FREE** Frontier Technology Webinar!

In this webinar we will give attendees an introduction into one of the most commonly used UAS processing softwares on the market, Pix4D. The Pix4D software enables UAS operators to utilize high quality UAS imagery, and from it, produce quality deliverables such as digital elevation models, point clouds, orthomosaic images and more. This data can then be utilized in your current workflows to aid in surveying and design, construction, and forensics.

This webinar will give a brief overview of how photogrammetry for UAS works, as well as show the basics in processing a full project in the Pix 4D software. We will also cover additional applications and tools such as Pix4D Capture and Pix4D Cloud processing and sharing. So join us, and learn how to make your UAS data processing efficient and easy!
