

Tx Transmitters

Precision locator range

The transmitter range features locate frequencies compatible with locators across the Radiodetection Precision Locator ranges, and can be easily customized to match your chosen locator using the 'model' feature.

All transmitters feature constant current across their entire bandwidth in all modes (direct connect, clamp or inductive mode), and deliver convenience on-site with an IP65 ingress protection rating, removable accessory tray and a large, high-contrast, backlit LCD screen.

The Tx range is designed to meet the demands of tracing utilities through today's complex underground infrastructure.

- The Tx-10B locator transmitters with advanced Bluetooth® link from 1/3 mile.
- The Tx-10 has the highest power capability with both Fault-Find and CD modes as standard.
- The Tx-5 has a medium power and induction capability as well as Fault-Find.
