

Trimble T70

TABLET

Connect to a better way to work

The Trimble® T70 is a compact Android™ tablet built for the modern surveyor. Unmatched in versatility, it moves seamlessly across your jobsites — whether as a controller for a GNSS rover, a robotic total station, or for machine guidance.

With a powerful communication suite and Trimble WorksManager cloud software integration, you stay connected to your hardware and your team in real time.

Key Benefits

Versatile

The T70 offers seamless transition across different workflows, acting as a single controller for GNSS, robotic total stations, integrated surveys and even machine guidance. Its powerful processor and Android operating system provide a smooth field software experience for any task, from grade checks to detailed site status reports.

Compact and flexible

The T70 is the smallest and most compact tablet in the Trimble portfolio. It can operate as a standalone tablet, or can be used as a controller for GNSS or robotic total station workflows, as well as for machine guidance, giving you unmatched adaptability without having to change controllers or projects when switching between Trimble software. Additionally, the T70 was specifically designed to clip directly onto Trimble SPS Series Total Stations, providing a powerful, integrated on-board controller without compromising instrument accuracy.

Connected

The T70 ensures you're always connected, in the field and to the cloud. Get full comms capability with integrated 4G WWAN, Wi-Fi® and both Bluetooth® classic and low energy. The modular Trimble Empower™ system lets you instantly attach your preferred radio or sensor. For project collaboration, leverage Trimble WorksManager for real-time team coordination, or use Quick Share for rapid local file transfers.

Technical information*

- 6-inch multi-touch sunlight-readable screen designed for finger, glove or stylus use
- Secure, modern Android operating system
- Qualcomm QCS6490 processor with 8 GB memory and 128 GB storage, delivering a smooth software experience
- Integrated 4G WWAN, Wi-Fi, Bluetooth and NFC connectivity
- Integrated camera for streamlined documentation of site conditions
- 12 hours of continuous operation from a long-life integrated battery
- 760 g (26.8 oz) lightweight design for comfortable, all-day use
- Versatile controller for standalone use, rod-mounted GNSS and robotic surveys, onboard SPS Series Total Stations or for Trimble Siteworks Machine Guidance
- Add a Trimble Protected protection plan for worry-free ownership over and above the standard Trimble product warranty. For details, visit trimbleprotected.com or contact a local Trimble dealer
