

## Reason

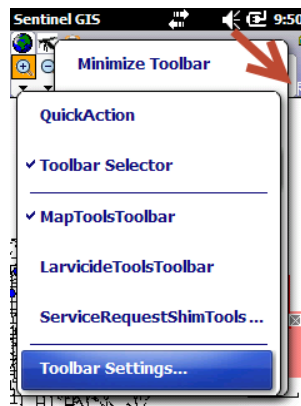

Sentinel GIS ArcPad applets purposely hide most standard ArcPad tools, particularly those that would add complexity to the user experience. This includes tools to add or create data, manage layer properties, or work with laser rangefinders and cameras.

ArcPad 'power users' may want to add some of these tools back in to the user interface for various reasons.

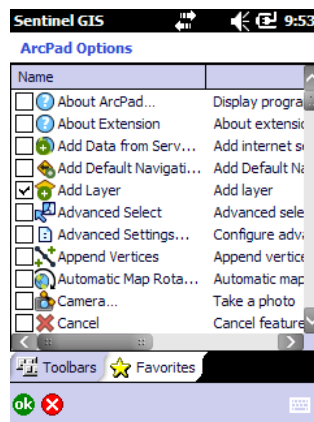

This Support Note shows how to enable the ArcPad Favorites toolbar and add standard ArcPad tools.

## Solution

1. In ArcPad, tap the toolbars drop-down, select Toolbars and then select Toolbar Settings...

2. Tap on the Favorites tab, then select the standard ArcPad tools that you want to enable. *Please Note: do not expect all standard tools to work properly with Sentinel GIS. Test tools and workflows before deploying to the field.*

3. Tap OK. You will need to restart for the changes to take effect.

4. After restarting, you will have a Favorites toolbar containing the tools that you added. This change is device-specific and persists in other Sentinel modules.

To remove the Favorites toolbar, go to File Explorer. Browse to My Documents\My ArcPad. Delete the ArcPad.apx file. This will return the toolbars to their default configuration.
