

Simplify your GIS Data Integration with Trimble Business Center

The GIS module is an extension in Trimble Business Center that simplifies GIS data integration by connecting directly to a file geodatabase or sde database. This workflow can process data collected through survey or mapping workflows with Access or TerraSync.

The GIS module for Trimble Business Center offers the following benefits:

- Same schema for survey and mapping workflows.
- Direct integration of CAD data to GIS.
- Common destination database.
- Transition from Pathfinder Office to Trimble Business Center for post processing data.

August 21st | 2pm-4pm
Rock Bottom | Westminster Promenade
10633 Westminster Blvd.
Westminster, CO 80020
