

Pix4D Workshop

For Geospatial UAS Applications

Save The Date!

Location: SE Tech- Sioux Falls, SD

Dates: March 27-28, 2018

Time: 8:00am–5:00pm Each Day

Course Description:

This course will focus on the start to finish workflows with the Pix4D software. We will discuss mission preparation, flight planning and proper flight operations in the field for a successful data set. This will include a run-through of the Pix4D Capture mobile application, as well as things to consider for multiple UAV platforms. We will start with the basics of processing an example site, as well as an explanation of all of the settings and processing options. After the basics, we will run through the more advanced features of the software, including point cloud and mosaic editing. This will be a beneficial class for anyone who is new to Pix4D, as well as anyone who has already been using Pix4D.

By the end of this workshop each attendee will have an understanding of the following concepts: Photogrammetry • Image Capture • Georeferencing and Aerial Triangulation • Verifying Accuracy • Outputs Workflow • Interpreting the quality report and processing options.
